**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Poirion (6232990) in view of Kang (6480198).

Regarding to claims 1-2, 4-6, and 8, Poirion discloses a core logic chip (1) for use in a personal computer system comprising a system memory and a display, said core logic chip being incorporated therein: a primary memory control circuit (4) asserting a first read/write signal; a first data transmission channel (10) in communication with said primary memory control circuit and a first portion of said system memory, transmitting said first read/write signal to said first portion of said system memory; a graphics controller (5) in communication with said display, processing and outputting image data to said display; a backup memory control circuit (frame buffer controller, 15) in communication with said graphics controller, controlled by said graphics controller to assert a second read/write signal; and a second data transmission channel (17) in communication with said backup memory control circuit and a frame buffer (18), transmitting said second read/write signal to said frame buffer.

Poirion does not disclose placing the frame buffer in the system memory.

Kang, in the same computer field, discloses combining a system memory and a frame buffer into a unified system memory.

In light of Kang, it would have been obvious to one of ordinary skill in the art to Poirion's system memory and frame buffer into a unified system memory because a

unified system memory has more space than a regular frame buffer and uses less parts than using both a frame buffer and a separate system memory (see col. 2, lines 26-36).

Regarding to claim 3 and 7, Kang also discloses the system memory is DRAM.
